Dear Blender team,

I am writing to apply for a software engineering position at Blender. I recently graduated from TU Delft with a Master's degree in Computer Science, specializing in physics-based simulations and computer graphics. I would be excited to bring that experience to your team.

What draws me to Blender is the quality of the software that you build and the open source, community-driven philosophy. I am an agile and self-sufficient person who is comfortable taking ownership of a problem and driving it to completion without needing a lot of structure around me.

My interest in graphics and simulation is what turned programming from a routine skill into a genuine passion. Early on, coding was more about solving the problem at hand. Once I started creating visualization and simulation software, I began to truly enjoy what I had made. For my Master's thesis, I implemented a fast multipole N-body solver in C++ and integrated it into t-SNE with an OpenGL visualization layer to inspect the results directly. My Bachelor's thesis explored how ray reflection distributions evolve under microstructure smoothing, again implemented in C++. Outside of my coursework, I built a Blender addon that generates terrain using simulated hydraulic erosion. I also led a small team building procedural terrain generation with Perlin noise and Marching Cubes in Unity. I wish to keep making efficient software centered around simulation and graphics which I think makes me a strong fit for what Blender does.

Beyond the technical side, I bring strong team and communication experience as well. During my internship at Feedback Analytics, I led a five-person team and worked directly with the client to gather requirements, which taught me how to communicate clearly and keep a project moving without heavy oversight.

I would welcome the opportunity to contribute to Blender's development, whether on simulation tooling, rendering, or other areas where I can add value. Thank you for considering my application. I would be glad to discuss how my background could fit your team.

Sincerely,
Lucas Furer
